

KEDETECT™ CW RVD (RESIDUAL VAPOUR DETECTOR) Product Information

Benefits

The KeDetect CW RVD (Residual Vapour Detector) is part of the KeDetect family of Chemical Warfare Agent (CWA) detection equipment products. The CW RVD is designed for use by military, security services, first responders, hazard material teams and decontamination teams.

The CW RVD is a highly effective, non-electronic, de-masking aid which is fast acting and easy to use. It provides the user with the ability to quickly detect residual amounts of all known and unknown nerve agents, Sulphur Mustard agents and Blister agents. When assessing whether to remove PPE, the CW RVD can be used to detect residual amounts of CWA vapour in the air to ensure safe removal or retention of PPE equipment in the area sampled. The CW RVD uses small volume wet chemistry to create a colorimetric result, easily read and understood by the user.

Used for many years by NATO forces, the CW RVD is a proven technology and relied upon by operational forces today. With a customisable case, the CW RVD can be tailored for use by military, security services, first responders, hazard material teams, decontamination teams and other non-military personnel. It is light in weight, portable, contains 15 tests of each chemicals type and has a 4 year shelf life. A safe and non-hazardous CW RVD Training Kit is also available for classroom and field training.

The KeDetect™ CW RVD is NATO codified and is now available to approved overseas CBRNE organisations, as well as security organisations and the Military.

- Field proven by militaries and security organisations
- Quick time to result in < 6 minutes
- Reliable reproductive results
- Light and portable
- Class-leading detection sensitivity and specificity
- Can be used while wearing PPE
- Detects all known and unknown residual vapour nerve agent, sulphur mustard agents and blister agents
- Non-electronic
- Results in < 6 minutes
- Light in weight <500g Dimensions: 16cm x 15cm x 7cm
- 15 x Nerve Agent tests
- 15 x Sulphur Mustard & Blister Agent tests
- NATO codified
- 4 - year shelf life
- Field proven
- Customisable case
